

## Kajiado Recover & Food Security Programme

We at Minerex Environmental have made a 3 year commitment to the Kajiado Recover & Food Security Programme in Kenya. In particular, we have committed to working with CMS Ireland to fundraise for a village called Meto located in the Maasai area of Kenya. Our fundraising will go directly towards the specific needs of the village and will help:

- to minimise the future risk of drought;
- to provide a sustainable income to the village;
- to provide the people of the village with skills in sustainable agricultural practice.

These are simple but effective measures and can be put into place with your help.

The project specific goals are as follows:

- Provide a piped water supply to the centre from an existing spring source;
- Build new water storage tanks for the spring supply;
- Build dams and water pans in the stream which forms a boundary to the property;
- Provide rainwater harvesting systems for the roofs of the buildings;
- Provide drip-irrigation plots for growing vegetables;
- Provide milking cows for the existing parlour;
- Provide an agro-vet store to sell certified crop seeds, tools and veterinary supplies, to the community;
- Restore a guest house on site;
- Plant an assortment of tree seedlings;
- Provide appropriate training for the successful execution of all the above.

In order to achieve these project goals in the most effective manner, all of the equipment and training required have been identified and priced. We invite you to purchase one of the following 'gift packages', which will provide simple but effective measures to achieve the project goals and will help you to see exactly what your donation will provide.

Alternatively we invite you to pledge a donation. Please fill out your details and hand into the Minerex stand for instructions on how to pledge online.
